## Final Project proposal

For my final project, I want to make an interactive puzzle game using images and paintings of traditional artists. It will consist of 5 or more paintings by well-known artists. The work itself will be experimental in nature. It will explore the various combinations of different image parts inside the single frame and deconstruct the original image until it provides a different meaning to a user. The images will be divided by the square grid lines (perhaps the grid line will be invisible), and when the user clicks inside the single grid, the current image part is going to swap for another image. The challenge for me will be to figure out the proper layouts and divisions of the chosen images. I will probably use the editing software to cut them into square pieces before making them work on the webpage. There will be accompanying music throughout the game to create a playful atmosphere. However, there's no right way to play this game, the user may enjoy any random mixture of their collage as long as they wish.

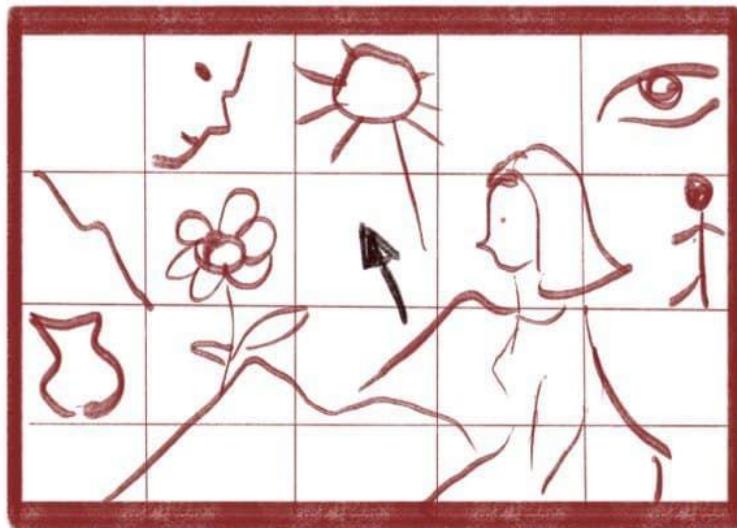

Below are my thumbnail sketch and a moodboard of the potential paintings and colours.
